

Dealership Opportunity

We are a leading R&D manufacturer of CT systems in the medical and industrial fields with top share of CT systems in Japan. We are currently seeking partners to support the international expansion of our veterinary CT systems amongst other products.

While conventional CT systems currently available on the market often exceed US\$150,000, our veterinary CT system is cost-efficient, leveraging shared technologies from our medical and industrial CT platforms. This approach enables us to offer a price range that is ideal for clinics and hospitals. Additionally, we offer digital X-ray sensors and dental-related products to support ideal work flow of clinics and hospitals.

With over 37,000 users in Japan, we are confidently expanding to the international markets and we are grateful if you be part of it.
