

RF is the No.1 CT manufacturer

Made in Japan

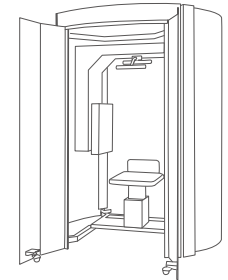

Ninja's CT Panel We are about to start offering

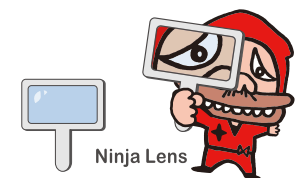

70% of the CT performance is determined by "the panel", which accounts for 65% of the cost of CT.
In short, "the essential of CT" is the panel.

Compared to helical CT, our panel has 8 times higher in the resolution, 10 times higher in sensitivity, and 5 times wider in the width of the wavelength. It broadens the scope of disease examination.

CT Sample Design

We will disclose the secret of our newly added technology, a miracle "Ninja Lens", which "increase the resolution to 30 times higher" on the spot it is held.

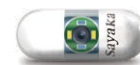

(This is the technology we have originally developed with "Capsule Endoscope" we announced in 2001.)
