

Full of enjoyable information (Updates everyday)

Hiring

Join us in shaping the future of the global market! (Full & part-time)

Updates

We will release various technologies freely available to the world.

Light weighted CT, Reduction of 70% lead!

90% of the CT function: The gantry itself is shielded with lead.
(The CT is completed only by the outer case.)

No need of X-Ray Room, CT can be placed anywhere!

Equipped with Multi-CMOS Panel!

Compared to conventional CT panels, it offers ultra-high resolution, 10 times higher. This allows magnification of previously unseen areas, making them clearer and detailed. A comparison with the previous (normal) images taken reveals changes at a glance for diagnosis...

MRI images are available for display!

Current irradiators are designed for variable X-ray intensities, which can result in inconsistent and unstable frequencies. By calibrating them to a precise frequency and maintaining a stable wavelength, we can enhance the visualization of differences in tissue hardness and abnormalities.

Wrap the 'X-ray Power Generation Sheet' around for energy storage!

CT can be installed for an inexpensive monthly fee!

Too scared to treat without CT (Doctor who uses our CT)

'Lead' saved for an exceptionally light design
Affordable introductory price

Thick lead. Large x-ray room required.
Lying-down Helical CT

RF is the World's No.1 CT manufacturer
Industrial & Medical

We can customize housing to fit your rooms as we are the manufacturer! "Lead-shielded type" for all models.

A proposal from Ninja for "Super Easy Sign Language" for all over the world.
(Gesture)

By teaching universal sign language to elementary school students and above all over the world, we hope to reduce conflicts even a little by exchanges beyond language...

Startup Support Team Consult us
We withdraw non-used CTs of closed clinics
(while undertaking their lease balance),
and offer the revived CTs to new clinics at special price.

Ninja Computers
