

Dr.'s RF SYSTEM^{lab.} REPORT

Dr. Mike (GA)

Saving about 60% of the time

We are getting great pictures, it is very easy to use and we're saving about 60% of the time it used to take us to get a set of films on a patient. It has been a very affordable way to markedly upgrade our office.

Saving time is a key factor

Saving time is a key factor helping us see more people. Processing is one of my most disliked activities and I am very grateful, it is a thing of the passed.

Benefits in all areas of operation

Like most things, when you compare digital to paper, there are benefits in all areas of operation. Time, quality, ways of viewing films, storing, sharing, etc. are all vastly improved over the traditional system. I have not found anything I liked better from the traditional film-based x-ray process.

Impressed with technological advancement

Patients and doctors are impressed with the technological advancement of our clinic. The detail with which we can share the films with the patient in report of findings is greatly enhanced and gives the patient better understanding and increases increased compliance.

Elevated our practice to the next level

We are very pleased with the product and support. The support has been easy to use and very personal. The direct digital is much better in our opinion, to processing or using a digital x-ray reader. This product has elevated our practice to the next level.

NOTE

Stable result?

Image comes out differently depending on chemical temperature or use frequency. That is films. With NAOMI, you'd no longer be troubled by the unstable image result. What is more, the image is controllable afterwards.

VERY AFFORDABLE WAY TO MARKEDLY UPGRADE OUR OFFICE
