

Provides excellent result

Through research of the NAOMI system made me believe that it is the best system available to the veterinary market. I have fully implemented it into my practice and find that it provides excellent results. I can honestly say that the NAOMI system is one of the best investment for the future of my practice and veterinary medicine. Development chemicals and the maintenance of the film processor were both laborious and concerning to my technical staff. The NAOMI system allowed me to do away with those and let my technical staff concentrate on taking exceptional radiographs.

Today's veterinary clients demands that the best technologies be used

Today's veterinary client demands that the best technologies be used in the diagnosis and treatment of their pets. The NAOMI system gives us that cutting edge technology and our clients have responded to it in highly positive manner.

The NAOMI system is far superior to film-based radiology

The digital format of the NAOMI system is far superior to film-based radiology. We can now vector in on areas of concern and thus provide a better and faster diagnosis. The NAOMI system allows us to e-mail radiographs to specialists, thus alleviating the need to either send the radiographs with clients or wait for a postal service to deliver them; again allowing for a quicker diagnosis. Patient comfort is our first priority; the NAOMI system also allows us to control the contrast and brightness of the film, thereby alleviating the need to take multiple radiographs.

NAOMI SYSTEM IS ONE OF THE BEST INVESTMENT
